

sopro Imaging VET

Multi-Purpose Software

Sopro Imaging Veterinary software can be used to capture and archive x-ray images, color images and video sequences. Easy to use thanks to its different kinds of dental charts for each animal (Dog, cat, rabbit,...).

Use Sopro Imaging to print, send by email, export,..., all images and comments.

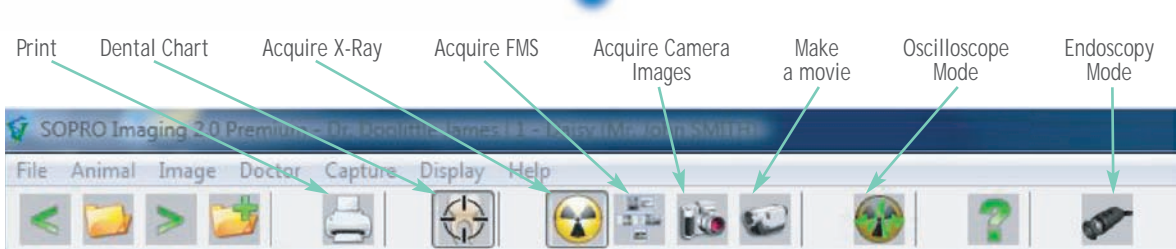

Networking

The installation and use of Sopro Imaging software is simplified when configured into a computer network.

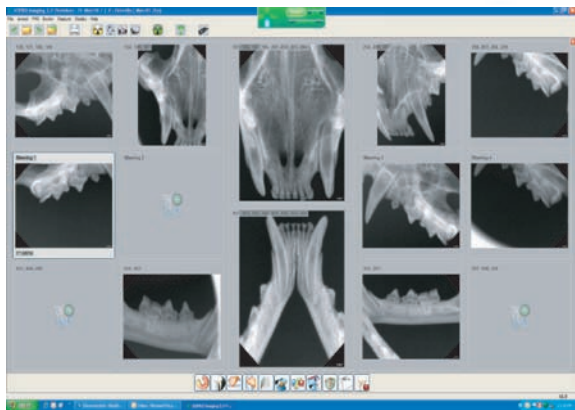

- Intuitive, multilingual software
- Simplified network integration
- Offers a wide range of image processing tools
- Images can be printed, send by email, exported,...

The Single Solution for all of your Imaging needs

One panel easily and intuitively manages all of your imaging acquisition hardware with a single click. Need color images? Need an X-Ray? Get started with a single click of your mouse.

Charting made easy

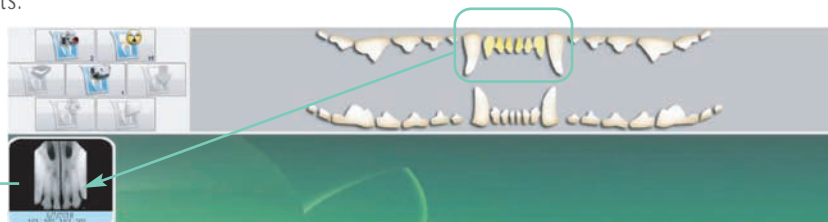

Full Mouth Series (FMS) available for Dogs, Cats and Rabbits.

This dental chart screen allows the mapping of dental images to particular tooth numbers.

The change in color tells us that dental images have been mapped to a particular set of teeth

The dental chart then can be used to filter the display to show only the shots that correspond to particular teeth. The figure above shows all the images mapped to the teeth indicated by yellow high-lighting.
